# Stainless Steel Shroud For Parlor Equipment

A stainless steel shroud to mount your parlor equipment in is both attractive and practical. Having hoses, tubes wiring, meter boxes etc. mounted behind a shroud gives your parlor the neat, clean and streamlined look you hoped for when you designed the milking facility. It also makes a lot of sense. There are fewer places for dirt to collect so clean up is a lot easier and the milk inspector is happier. Sensitive equipment is protected from dirt, chemicals and physical damage. The front door of the shroud folds down so it's easy to get at the equipment to perform maintenance. The shroud also adds stiffness to the parlor structure. From an installation standpoint, equipment dealers tell us that installation time and effort can be significantly reduced using a shroud. Of course, we will customize our shrouds to provide the proper size holes and mounting configurations for any manufacturers milking equipment. The shroud is made of 11 gauge type 304 stainless steel except for the door which is made of 14 gauge material so that it is lighter to open and close.

### What Our Customers Say:

Leroy, Nona and Mark Deputy  
East Berlin, PA  
717-432-3844  
Double 8 Vertical Lift Rapid Exit Parallel Parlor  
With Stainless Steel Shroud

We're glad we made the investment. It makes us that much more efficient and the whole parlor fits in a room 27' by 37'. We really like the stainless steel shroud which covers the pipes and wires. We like to keep the parlor clean and the shroud really helps.
